

Bima Fahimna

Backend Engineer

Depok, Indonesia | b.fahimna@gmail.com | +6282110201566 | [LinkedIn](#)

Backend Engineer | Golang | Distributed Systems

Summary

Backend Engineer focused on Golang, distributed systems, and scalable backend infrastructure. Experienced in building and operating production services handling 500K+ requests per minute, with hands-on ownership across system design, performance optimization, observability, and production reliability. Strong interest in distributed systems, platform engineering, and high-scale backend architecture.

Core Competencies

- | | | | |
|-------------------------|-------------------------------|-------------------------------------|-------------------|
| • Backend System Design | • Performance Optimization | • Distributed Systems | • Caching (Redis) |
| • Kubernetes & Docker | • REST & gRPC API Development | • Event-Driven Architecture (Kafka) | |

Professional Experience

Backend Engineer - Tiket.com, Indonesia

Apr 2024 – Present

- Architected a distributed caching layer with cache stampede and avalanche protection, reducing upstream traffic by 40%, P99 latency from 1.8s to 900ms, and infrastructure usage by ~30%
- Built and operated Golang and Spring Boot services handling 500K+ RPM through gRPC and REST APIs.
- Designed a Kafka-based ingestion pipeline with throttling and backpressure controls for reliable MongoDB ingestion under peak traffic.
- Optimized legacy services to improve scalability, reduce infrastructure costs, and increase system efficiency.
- Owned production reliability through on-call rotations, incident response, RCA, monitoring, and post-incident improvements.
- Conducted code reviews and refactored legacy components to improve maintainability and test reliability.

Software Engineer Internship - Shopee, Indonesia

Oct 2023 – Apr 2024

- Delivered production features across the full software development lifecycle, contributing to frontend, backend, testing, deployment, and operational workflows.
- Developed backend services in Golang, implementing REST APIs, business logic, and transactional workflows following clean architecture principles.
- Contributed to React and TypeScript frontend features, collaborating with product managers, designers, and engineers to improve user experience.
- Built automated tests and participated in quality assurance activities, improving feature reliability before production releases.
- Maintained CI/CD pipelines and observability tooling using GitLab Runner, Docker, Prometheus, Grafana, and Loki.
- Implemented concurrent processing using goroutines and channels, strengthening system performance and understanding of production-grade Go development.

Education

Bandung Institute of Technology, Bandung, Indonesia

Bachelor of Science, *Aug 2019 - Oct 2023*

Thesis: *Coral Reef Monitor Methods Using Deep Learning*, a Convolutional Neural Network model for coral reef monitoring utilizing coral reef images.

Technical Skills: Python, TensorFlow, OpenCV

- Participated in research that contributed to published academic papers. [[link to paper](#)]

Technical Proficiencies

Core:	Golang, PostgreSQL, MongoDB, Redis, Kafka
Cloud & Infra:	Kubernetes, Docker, Linux, AWS, GCS, Terraform
Frameworks:	gRPC, REST, Spring Boot
Others:	Java, BigQuery

Languages

English:	Professional Working Proficiency
Indonesian:	Native
Japanese:	Elementary
